

# Get paid while waiting for the crypto price you want

> A premium volatility & structured products layer on Solana.

§ 01 THE OPPORTUNITY

# Solana scaled. Yield product didn't.

\$35B in ecosystem TVL. \$1.5T in DEX volume. 15M wallets. Yet on-chain options TVL on Solana sits below \$50M – there is no consumer-grade yield product for SOL holders.

[ 01 ]

## \$35B

Solana ecosystem TVL

TokenTerminal • Nov '25

[ 02 ]

## \$1.5T

DEX volume YTD 2025

DeFiLlama • Dec '25

[ 03 ]

## 15M+

Phantom MAU • \$25B AUC

Phantom • 2025

[ 04 ]

## \$17B

Stablecoin supply on Solana

DeFiLlama • 2025

// THE GAP IS STRUCTURAL – AND OURS TO FILL.

## § 02 THE INSIGHT

# Rysk proved the wedge on EVM. No one has built it on Solana.

Rysk Finance shipped a fixed-price yield primitive on Hyperliquid. The product works. The mechanics translate. The audience is bigger on Solana.

## RYSK FINANCE / EVM

## On-chain RFQ for fixed-price yield

- Set a fixed price, receive yield upfront
- Fully collateralized – no liquidations
- Deployed on HyperEVM/ARB/ETH
- Audience: ETH-native yield seekers

## SOLANA / TODAY

## No equivalent product exists

- Zeta and Drift = pro derivatives DEXs
- Cega = exotic structured notes
- PsyOptions = dormant since 2023
- No "set-and-forget" yield primitive

→ The same product, on the chain with 15M wallets and consumer distribution.

§ 06 MULTI-ASSET FROM DAY ONE

# SOL first. Tokenized stocks next.

## 01

### SOL LIVE TODAY

Fixed price and yield on SOL, live at launch.

Sell SOL at your price. Buy SOL at your price. Same mechanics, no new asset risk.

→ LIVE IN PRODUCTION

## 02

### TOKENIZED EQUITIES NEXT

Fixed price and yield on tokenized TSLA, NVDA, and other on-chain equities.

Same product, same UI, bigger asset universe once tokenized supply is deep enough.

→ TARGETED FOR PHASE 2

SOL AT LAUNCH • TOKENIZED EQUITIES IN PHASE 2

§ 07 WHY SOLANA, WHY NOW

# The pieces are finally on the table.

Liquidity, latency, distribution and institutional validation all arrived in 2026. The last missing piece is a yield product built for it.

| TECHNICAL                                                  | DISTRIBUTION                                                  | INSTITUTIONAL                                                    |

» Solana now hosts more spot trading volume than any other chain – but yield products on it look like 2021.

§ 08 COMPETITIVE LANDSCAPE

# Pure yield products on Solana underbuilt — and not consumer-shaped.

// THE OPEN QUADRANT

Solana's yield DEXs (Zeta, PsyOptions) target traders. Vaults (Cega) are structured products with multi-week lock-ups. Nothing on Solana ships a one-screen, set-and-forget yield product for holders.

// WHY UX WINS THIS LANE

- Consumer holders won't open Greeks UIs
- RFQ pricing > AMM for thin-volume markets
- Provide yield to non-yield product such as PAXG

CONSUMER-SIMPLE UX →

## § 09 MOAT

# Three compounding moats — not just a UI.

Defensibility scores: ●●● strong · ●●○ moderate · ●○○ weak

01

## NO CONSUMER APP

Every competitor ships a developer terminal or raw quote screen. Nobody has shipped a wallet-native, tap-to-quote consumer app for yield products on Solana. Until one exists, we own the front door.

02

## FIRST-MOVER POSITION

First live product earns the wallet placements, the market-maker relationships, and the on-chain track record before anyone else gets a chance to try. Later entrants copy the UI, not the two-year head start.

03

## MOBILE-FRIENDLY

Fully mobile, tap-to-quote flow inside the wallet users already carry – no desktop terminal, no separate app. Matches how retail actually holds and trades on Solana today.

// No one else has shipped this to consumers – and being first locks in the wallet placement that makes it stick.

§ 10 ROADMAP & GTM

# Ship narrow. Earn distribution. Then expand.

Three phases. Each unlocks the next, none overcommit.

| Q1-Q2 2026                                                                                                                                                                                                                                            | Q3-Q4 2026                                                                                                                                                                                                                                                              | 2027                                                                                                                                                                                                                                                                   |
