

Edventures Wallet

Digital money. Family rules.

A stablecoin wallet families can use together—
parents set the boundaries, kids learn by doing.

Brittany & Mark

Solana Startup Village · Borneo 2026

PARENTS HAVE TWO BAD CHOICES

Keep kids out—or hand them a wallet built for adults.

- 1 Keep digital money off-limits**
Kids miss the chance to learn with a parent beside them.
- 2 Use an adult crypto wallet**
Trading, speculation and technical choices arrive before family guardrails do.

**“We want them to learn.
We also want to be there
when they do.”**

This is not a lack-of-interest problem. It is a product-design problem.

FAMILY RULES, BUILT INTO THE MONEY

A calm place to save, spend and learn together.

Parents decide who, how much and how often. Kids use stablecoins for real goals and everyday choices. Lessons appear when they matter.

Parents set the boundaries.

Limits, known people and approvals are part of the wallet—not a conversation after something goes wrong.

Kids learn with real stakes.

Allowance, saving, sharing and paying become small, repeatable money habits.

The rails stay invisible.

Dollar-denominated balances and plain language up front. Solana handles the work underneath.

One family. One clear view.

Start with what the family is trying to do.

The home screen shows the family balance, each child, the shared goal and the next useful lesson—without exposing the machinery underneath.

- ✦ Dollar-denominated stablecoin balance
- ✦ Separate parent and child experiences
- ✦ Purpose before portfolio performance

Clear boundaries that grow with them

Parents set the rules once.

Daily, weekly and per-person limits shape what a child can do. Larger actions automatically ask for help.

- ✦ Known people only
- ✦ Approval above a parent-set amount
- ✦ Limit increases wait four hours

These rules are enforced by the wallet—not left to a push notification.

Guardrails without dead ends

Bigger decisions come back to the parent.

When a child crosses a limit, the app explains what happened and routes one clear request to the parent.

- ✦ Exact person, amount and purpose
- ✦ Approve once—not forever
- ✦ Warm, understandable feedback for the child

A weekly habit—not another lecture

Allowance arrives with a decision.

Each child chooses how to divide their allowance between spending, saving and sharing.

- ✦ Scheduled in family time
- ✦ Child-selected Spend / Save / Share split
- ✦ Parents cover transaction costs invisibly

The lesson is the action: every week, the child practices making a plan.

Purpose before price

Save together for something the family can see.

A trip, a car, a first apartment or a special dinner becomes a shared goal—with progress every family member can understand.

- ✦ Earmarked stablecoin savings
- ✦ Transparent family contributions
- ✦ No separate accounts to manage

Help at the moment it matters

Scout explains. The family decides.

Short lessons and a friendly guide turn unfamiliar money moments into plain-language choices.

- ✦ Contextual two-minute lessons
- ✦ Voice or text, designed for parent and child
- ✦ Scout can prepare an action—but never move money alone

From abstract balance to ordinary money

Scan. Review. Pay.

At a participating shop, the family sees the merchant and amount in familiar terms, then pays within the rules already in place.

- + Merchant QR payment flow
- + Amount and recipient reviewed before payment
- + The underlying Solana transaction stays out of the way

WORKING PRODUCT. FIRST FAMILIES ALREADY WITHIN REACH.

We built the family loop before asking families to trust it.

BUILT

Working devnet product

Parent and child accounts, rules, approvals, allowances, goals, learning and merchant pay.

FIRST

Edventures families

An existing community gives us a trusted place to recruit, observe and improve the first pilot.

NEXT

Ten-family pilot

Measure onboarding completion, weekly family use, goal contributions and approval behavior.

PLANNED MODEL

Parents pay for a calmer family money experience.

Family subscription

Paid family features, with carefully selected payment or learning integrations.

- No advertising to children
- No selling family data
- No incentive to trade more

FAMILY FINTECH IS PROVEN. STABLECOINS CHANGE THE RAILS.

This can become a meaningful business long before it becomes everyone's wallet.

1 million families
× \$10 / month
= \$120M ARR

A scale benchmark—not a forecast. Pricing shown only to make the opportunity concrete.

Why now

Parents already pay for allowance, controls and financial education. Stablecoins add portable, dollar-denominated money to that proven behavior.

Why on-chain

Rules can travel with the money: limits, approvals and authorized people remain enforceable wherever the balance is used.

Why Solana

Fast, low-cost settlement and programmable wallet controls make small family transactions practical. Families never need to configure the infrastructure.

OTHERS SERVE ONE SIDE OF THE FAMILY

We combine the parts families need in one experience.

Typical product focus	Family controls	Stablecoin-native	Learning in the action
Greenlight / Acorns Early	Yes	No	Yes
GoHenry	Yes	No	Yes
Phantom / Solflare	Not family-first	Yes	Not family-first
Edventures Wallet	Built in	Yes	At the moment of use

Our wedge is not “a simpler crypto wallet.” It is a family money product that happens to run on better rails.

START WHERE TRUST ALREADY EXISTS

Ten families teach us how to earn the next thousand.

1

Observe deeply

10 families

Recruit from Edventures. Instrument onboarding and weekly use. Complete a security review.

2

Build the invitation loop

100 families

Improve rules, approvals and goals from real behavior. Let trusted families invite trusted families.

3

Open the path

1,000 waitlist

Partner with learning communities and parent educators. Publish family money challenges that lead into the product.

BUILT BY PEOPLE WHO UNDERSTAND BOTH SIDES

Education, community and wallet infrastructure in one founding team.

Brittany

PRODUCT · EDUCATION · COMMUNITY

Brings web3 market and safety experience, a career built around learning, and the lived family use case behind the product.

Mark

ENGINEERING · WALLET INFRASTRUCTURE

Built the working family wallet and the systems that translate parent intent into enforceable product behavior.

HELP US MOVE FROM DEVNET TO TEN REAL FAMILIES

We know what to build next. We want the right people beside us.

01 Security and architecture review

Pressure-test the wallet rules before families depend on them.

02 Solana and stablecoin ecosystem support

Help us harden the production path and invisible fee experience.

03 Pilot and payment introductions

Connect us with aligned family communities and everyday payment partners.

Digital money. Family rules.

Let's give families a safe place to practice the future together.
